Custom Production Certified To ISO 9001: 2008 Standard

Release date: September 22, 2009

In recognition of its sound operating practices, Custom Production of Crestview, FL was certified to the International Organization for Standardization (ISO) 9001: 2008 standard by SRI Registrar of Seven Hills, PA. The certification validates Custom Production's efforts to maintain, improve and deliver the highest level of quality for aluminum component users in a variety of industries.

Custom Production manufactures precision CNC aluminum parts at its plant in the Okaloosa County Airpark in Crestview, FL. The privately-held firm was founded in 1999 to serve the bicycle component market and was recently acquired in 2008. The firm's new President, Elizabeth Skrovanek and its General Manager Michael Skrovanek charted a path to elevate the company's quality and diversify its client industry base. Mrs. Skrovanek said, "Many potential customers require certification as an entry ticket. We knew we had good internal practices, but wanted to receive the formal certification to demonstrate our prowess."

Larry Ard, the Director of Operations added, "A good quality system drives cost out of the process for both the manufacturer and the customer. In today's economy, reducing cost and improving value is paramount."

About Custom Production

Custom Production, a woman-owned small business, machines precision aluminum parts for industries such as automotive, construction, defense, electronics, marine, and medical. Custom Production is also the largest independent US producer of aluminum chainrings and other bicycle drive train components. Its plant is located in Florida's Panhandle, situated within 500 miles of manufacturers in Alabama, Arkansas, the Carolinas, Florida, Georgia, Kentucky, Mississippi, Louisiana, Tennessee and Texas.
